Antananarivo Communication 5G Base Station Project Bidding Project

Overview

How many 5G base stations does China Mobile Need?

The CBN/China Mobile tender requests bids for 480,397 5G macro base stations in the 700 MHz band which is roughly equivalent to the number of 2.6 GHz base stations already deployed by China Mobile. Based on past big 3 (China Mobile, China Telecom, China Unicom) tender results, Huawei and ZTE are expected to win approximately 85% of the business.

Why is CBN cooperating with China Mobile on 5G?

Founded in 2014, Beijing-based CBN is the most recently established, so lacks users and infrastructure, which is partly why it is cooperating with China Mobile on 5G. Concurrently, a bidding announcement for the centralized procurement of multi-band (including 700MHz) antenna products was also issued. This project is a centralized bidding project.

Who will win China 5G contract?

Based on past big 3 (China Mobile, China Telecom, China Unicom) tender results, Huawei and ZTE are expected to win approximately 85% of the business. That would leave only 15% for Ericsson or other well known 5G base station vendor, but probably NOT Nokia which was shut out of the last China 5G contract awards.

How many base stations will CBN & China Mobile deploy this year?

CBN and China Mobile are reportedly promising to deploy 400,000 base stations this year. Robert Clark of Light Reading wrote, "That seems unlikely – it took the incumbent operators nearly two years to reach that mark – but it seems certain that CBN will offer its first commercial services late this year or early 2022."

Antananarivo Communication 5G Base Station Project Bidding Project

The business model of 5G base station energy storage ...

The literature [2] addresses the capacity planning problem of 5G base station energy storage system, considers the energy sharing among base station microgrids, and determines the ...

Look Before You Leap: Secure Connection Bootstrapping ...

Jun 5, 2025 · The communication overheads and computational delays of these signature schemes and authentication protocols will be further aggravated in 5G networks since 5G ...
