Battery cabinet base station energy heat shrink production

Overview

How long does a battery last in a cellular base station?

The heat generated within the battery cabinet can vary depending on the ambient temperature. For reliable operation and maximum useful battery life, the enclosure must be maintained between +10°C to +30°C. Batteries used in cellular base stations are usually placed in cabinets to protect the equipment. No battery lasts forever.

How to improve battery pack performance?

As electricity flows from the charging station through the charging cables and into the vehicle battery cell, internal resistances to the higher currents are responsible for generating these high amounts of heat. Active water cooling is the best thermal management method to improve battery pack performance.

What is a cellular base station battery?

Batteries used in cellular base stations are typically located in cabinets that are vented to protect the vital equipment from the fumes and corrosive chemicals found in the wet cell batteries, which are often lead- acid or valve regulated lead-acid (VRLA).

What factors affect battery performance?

In battery back-up systems, heat and overcharging are two of the most important factors that lead to battery degradation, lower performance and even thermal runaway. Controlling and stabilizing the ambient temperature seen by the back-up battery is critical to battery performance and lifetime.

What happens if a battery is damaged by heat?

Once the battery is damaged by heat, the capacity cannot be restored. In battery back-up systems, heat and overcharging are two of the most important factors that lead to battery degradation, lower performance and even thermal runaway.

What is a battery back-up system?

Battery back-up system used for the Telecom Industry. A battery back-up system consists of a series of power inverters, charge controllers/rectifier, and storage batteries. According to FCC order 07-177, when the power to a cellular antenna tower goes out, emergency batteries must provide back-up power for at least 8 hours.
