What are battery SoC & SoH?

What are battery SoC and SoH?

The State of Charge (SoC) indicates current energy levels like a fuel gauge, while State of Health (SoH) measures battery degradation over time. Understanding these metrics is critical for optimizing performance, preventing failures, and maximizing battery lifespan across devices from smartphones to electric vehicles.

What is battery state of health (SoH)?

Understanding battery state of health (SoH) Battery State of Health (SoH) tells how good a battery is. It shows how much life the battery has left. SoH compares the battery's current condition to when it was new. If a battery has 80% SoH, it can only hold 80% of the charge it could when it was new.

What does SoH mean in a battery?

Battery SOH is typically expressed as a percentage: 100% indicates a brand-new condition, while lower values signal deterioration. Cylindrical battery pack composed of individual cells, where each cell's condition impacts the battery's overall State of Health (SOH) Temperature: Extreme temperatures accelerate battery aging.

How do you measure battery SOC in a BMS?

Certain well-known techniques used to measure battery SOC are also applicable to BMS SOH estimation, including: Coulomb counting: The battery experiences a simultaneous reduction in health status and a loss of rated capacity. Thus, once the rate at which ability decays over time is known, SOH can be found.

How do you calculate SOC in a battery?

The most common way to define SOC is by calculating the ratio of the battery's current status of maximum charging to its rated capacity, expressed as the following equation and referred to as Capacity Fade: While for SOH estimation based on internal resistance increase, the equation will in turn be defined as:.

What is a battery SoH test?

Real-time SOH data being monitored via a diagnostic interface connected to battery cells Capacity Test: Fully charging and discharging a battery to measure its actual capacity, then comparing it to its original capacity to determine Battery SOH. Though direct and accurate, this method is time-consuming and may cause wear.
