Brad Communication Base Station Inverter Grid-Connected

Overview

What is the control design of a grid connected inverter?

The control design of this type of inverter may be challenging as several algorithms are required to run the inverter. This reference design uses the C2000 microcontroller (MCU) family of devices to implement control of a grid connected inverter with output current control.

What is a Brad communication PLC?

“push-to-lock” technology for fast, simple and secure connections. Brad communication products provide access to over 40 industrial networks and fieldbuses, including a variety of Industrial Ethernet protocols, such as Modbus™ TCP, EtherNet/IP™ and PROFINET.® Brad communication PLC mod.

What should a user not do when using a grid connected inverter?

The user must not touch the board at any point during operation or immediately after operating, as high temperatures may be present. Do not leave the design powered when unattended. Grid connected inverters (GCI) are commonly used in applications such as photovoltaic inverters to generate a regulated AC current to feed into the grid.

What is a single-phase grid-connected inverter?

A single-phase grid-connected inverter, with unipolar pulse-width modulation, operates from a DC voltage source and is characterized by four modes of operation or states. Two modes take place during the positive load current period and two modes in the negative load current period, as shown in Table 6. Table 6.

How a grid connected inverter works?

Every algorithm for grid-connected inverter operation is based on the estimation or direct measurement of grid-voltage frequency and phase angle.

Both parameters are fundamental for correct operation and special care must be taken in their detection to avoid the influence of any external noise.

How to choose a grid-connected PV inverter?

Efficiency: The selection of a grid-connected PV inverter is mainly based on its efficiency. The inverter must be capable to attain a high efficiency over a wide range of loads. Due to the reduced, and high efficiency is achieved. and disconnect it from the grid for safety purposes, while supplying power to the local load. In
