# Bulgaria installs solar air conditioner

## Overview

---

Should you install air-conditioning in Bulgaria?

Bulgaria's Black Sea coast has regular summer temperatures over 30°C (86°F) and, particularly if you're in an apartment block, you might want to install air-conditioning. But keep in mind that air-conditioning uses a huge amount of electricity, which is becoming increasingly expensive, and that it can aggravate asthma or other respiratory problems.

Do I need central heating in Bulgaria?

Unless you plan to visit a property only in the summer, you need to consider central heating, although air-conditioning is really a luxury. Central heating systems in Bulgaria may be powered by electricity, gas, oil, solid fuel (usually wood) or solar power. Most rural properties use wood-fired heating with an electric boiler as a back-up.

How much does an air-conditioner cost in Turkey?

The most effective air-conditioners are wall-mounted units, which often have a heat pump attached for economical heating in winter. A good-quality air-conditioner costs around 1,000 to 1,500 lev (€500–750), plus 100–150 lev (€50–75) for installation. Cheaper brands, such as the Turkish-made Beko, cost around half this and can be very noisy.
