Can stacked photovoltaic modules be used

Overview

The GERMI scientists suggest that instead of using a single layer of PV panel, stacking two layers of PV panels one above the other, separated by a small distance could work wonders. What are photovoltaic modules?

Photovoltaic modules are made up of a mosaic of solar cells. Here is a description of their main features and of Enel Green Power's innovative solution. There aren't any solar panels at a thermodynamic plant, also known as a concentrated solar power station.

Can stacked PV panels be used in small scale solar power plants?

According to the GERMI scientists, the concept of stacked PV panels can open up new avenues towards large scale generation even for the small scale solar power plant. "The two-layer PV system can be implemented in all the roof top installations around the world," Harinarayana said.

Can photovoltaic panels improve electricity generation from a solar power station?

Researchers at Gujarat Energy Research and Management Institute (GERMI) in Gandhinagar have proposed a novel method to enhance electricity generation from a solar power station. They say that stacking up photovoltaic (PV) panels makes for more efficient generation of power without having to use huge plots of land to lay out the panels 1.

Why choose our photovoltaic module manufacturing equipment?

Our photovoltaic module manufacturing equipment are the result of our research and experience, but above all of our ongoing consultation with our customers. This means the product is specifically made-to-measure to their requests and needs, assuring a very flexible operating method when defining the order and during the production process.

How are photovoltaic modules produced?

Generally speaking, photovoltaic modules are produced by the use of automated equipment, and each one is designed for a specific function in the photovoltaic module manufacturing process. Therefore we are talking about serial or in-line machines, as production follows the same method as an assembly line.

Why should you stack up PV panels?

They say that stacking up photovoltaic (PV) panels makes for more efficient generation of power without having to use huge plots of land to lay out the panels 1. Around the world, these stations generate power through PV panels that capture sunlight and convert it into electricity.
