Dc2140 uninterruptible power supply

Overview

Why should you choose a DC UPS?

The DC UPS ensures superior system availability with the uninterruptible power supply. The DC UPS continues to supply your application reliably even if the supply network fails. This prevents system failures and downtime, as important processes keep running. Choose your UPS solution with the appropriate battery module or with integrated capacity.

How does an uninterruptible power supply work?

The uninterruptible power supplies have e.g. an adjustable maximum buffer time to protect the battery and the unit protects the battery from going into a deep discharge. Draining the battery all the way down can damage it in a very short period of time, especially if this occurs multiple times.

Why should you choose a DC UPS with integrated battery?

The compact DC UPS with integrated battery is particularly space-saving. It is therefore ideal for the easy retrofitting of existing systems. The DC UPS is characterized by its particularly easy handling, due to tool-free battery change during operation and an integrated communication interface.

What is a DC-UPS with external batteries?

The DC-UPS with external VRLA batteries feature the PULS' 1-Battery-Concept: This means each battery is individually charged and monitored, which avoids the need for matched batteries and ensures longest battery life. What is a UPS module?

UPS is the short version of "uninterruptible power supply".

What is a trio DC UPS?

The TRIO DC UPS combines an uninterruptible power supply with an integrated power supply, thereby saving space in the control cabinet. The

robust solution offers comprehensive functions such as signaling, diagnostics, connection to IPCs and PLCs, and a cold restart function in a compact housing.

What is a continuous power supply (UPS)?

UPS is the short version of "uninterruptible power supply". In many applications a continuous power supply is important because power fluctuations and outages can cause damage to control equipment as well as unexpected down time. This situation can lead to a loss of productivity and revenue.
