Dual-glass 60p module installation details

Overview

Can dual glass PV modules be installed using pressure clamps?

Dual glass PV modules can be installed using pressure clamps. Following are the installation diagram and corresponding loads. Here, L stand for long side of PV module, W stand for short side of PV module, black shadowing area stand for the installation area of the middle of clamp. Distance and length are provided in mm: pressure is provided in Pa.

What are the requirements for installation and maintenance of modules?

Installation and day to day maintenance of modules shall be in accordance with all safety precautions specified in this Manual and local laws. Installation module systems requires specialized skills and knowledge, and modules shall be installed and maintained by qualified persons.

Can Alko dual glass PV modules be connected to the racking system?

AIKO dual glass PV modules can be connected to the racking system using pressure clamps and bolts. PV Modules must be mounted as recommended and illustrated below. Other mounting configurations may be used provided that consultation is made with, and prior written consent is received from AIKO. Failure to do so will invalidate our warranty.

How do I install a PV module?

Using bolt to install the PV module on the bracket through the mounting hole at the back of the PV module's frame. installation details as below: M8 bolt tightening torques must be within 16~20Nm and M6 bolt tightening torques must be within 8~12Nm, respectively, depending on bolt classes.

What are Alko PV modules?

AIKO PV modules use specialized PV cables which have a cross sectional area of 4 mm² and are ultraviolet resistant.

How many clamps should a PV module have?

The length should be $\geq 50\text{mm}$ and the thickness should be $\geq 4\text{mm}$. The overlapped distance between the pressure clamps and the module frame should be at least 10mm, but no more than 12mm. When choosing clamp-mounting, please be sure to use at least four clamps on each PV module.
