What are the benefits of liquid cooled data centers?

Liquid cooling systems reduce the need for large chillers and CRAC units, cutting energy consumption dramatically. PUE scores for liquid-cooled data centers are consistently below 1.2, compared to 1.4 - 1.6 for air-cooled facilities. Moreover, many hyperscalers have committed to eliminating water-based cooling towers in drought-prone regions.

How big is the liquid cooling market?

Analysts predict: The liquid cooling market will grow from \$1.5 billion in 2024 to \$6.2 billion by 2030. By 2027, over 50% of new hyperscale capacity will be liquid cooled. AI workloads alone will drive an additional 15 GW of liquid-cooled data center capacity globally by 2028. Liquid cooling is no longer a niche technology.
