Will China's new energy storage sector grow in 2024?

BEIJING, Jan. 24 (Xinhua) -- China's new energy storage sector has seen a rapid growth in 2024, with installed capacity surpassing 70 million kilowatts, said an official with the National Energy Administration (NEA).

How long will energy storage projects last in 2024?

Regarding storage duration, the share of new energy storage projects with a duration of four hours or more increased to 15.4 percent in 2024, up by about 3 percentage points since the end of 2023.

Which regions in China have the most energy storage capacity?

Geographically, the top five provincial-level regions in China for cumulative installed capacity of new energy storage are Inner Mongolia, Xinjiang, Shandong, Jiangsu, and Ningxia.

What is new energy storage?

New energy storage refers to energy-storage technologies other than conventional pump storage. An energy-storage system charges when wind power or photovoltaic power generates a large volume of electricity or when the power consumption is low, and it discharges otherwise. China's operational efficiency of new energy storage continues to improve.

How important is energy storage?

Projects with storage durations between two and four hours represented 71.2 percent, while those with durations of less than two hours accounted for 13.4 percent. "New energy storage plays an essential regulatory role in the new power system, significantly promoting the development and consumption of renewable energy," Bian noted.

How long does energy storage last?

The average energy storage duration is 2.3 hours, an increase of about 0.2 hours since the end of 2023. New energy storage refers to energy-storage technologies other than conventional pump storage.
