How do customers choose home energy storage batteries

Overview

Why do you need a home battery storage system?

Home batteries store extra energy so you can use it later. When you only have solar panels, any electricity they generate that you don't use goes to the grid. But with residential battery storage, you can store that extra power to use when your panels aren't producing enough electricity to meet your demand.

Should you invest in home battery storage?

Whether you frequently experience outages, are paying exorbitant electric bills, or simply want more energy independence, investing in home battery storage may be the solution you're looking for. You don't need a home solar panel system to reap the benefits of home battery backup.

Do you need a battery storage system?

But with residential battery storage, you can store that extra power to use when your panels aren't producing enough electricity to meet your demand. Most batteries have a limit on how much energy you can store in one system, so you may need multiple batteries if you want to have enough capacity for long-duration backup.

How do you choose the best home battery storage system?

Evaluating the best home battery storage system goes beyond published specifications. The solar.com team also considers pricing, the bankability of the manufacturer, and the controlling software, as the best battery hardware is useless without operating controlling software to tell it what to do.

What makes a good battery?

The next thing to consider is the composition of the battery. Every battery on our list is either lithium-ion or lithium iron phosphate (LFP). While similar, the differences are noteworthy. LFP batteries typically have longer lifespans and increased thermal stability (aka less heat and fire risk).

How much does a battery cost on EnergySage?

The median battery cost on EnergySage is \$1,037/kWh of stored energy. Incentives can dramatically lower the price of batteries, but the 30% federal tax credit ends after Dec. 31, 2025. You can go off-grid with batteries, but it requires a lot of capacity and money, so most homeowners don't go this route. What exactly are home batteries?
