How to connect the cylindrical energy storage cabinet of the communication base station battery energy storage system

Overview

Can a Bess be used with a battery energy storage system?

Measurements of battery energy storage system in conjunction with the PV system. Even though a few additions have to be made, the standard IEC 61850 is suited for use with a BESS. Since they restrict neither operation nor communication with the battery, these modifications can be implemented in compliance with the standard.

When can large quantities of electricity be stored and retrieved?

Large quantities of generated electricity can be stored and retrieved anytime too little power is produced. Such a scenario can only be implemented when data is exchanged properly among a BESS, PV system and control system.

How does the control center communicate with the PV system?

The control center communicates with the PV system by a Modbus protocol and with the BESS by IEC 61850. The IEC 61850 data structures provided by the BESS were created beforehand by a configuration file. Fig. 5 presents a schematic of this structure. Fig. 5. use case "meeting the supply forecast". 5.1. Constraints on implementation.

What are the logical nodes of the battery system zbat & zbtc?

The logical nodes of the battery system ZBAT and the battery charger ZBTC are responsible for battery data. The node ZBAT contains general information on the battery, including battery type, capacity and charging (power injection). They can also be used to perform logical node tests and to switch the system on and off.
