# How to connect the signal base station to the battery

## Overview

---

How does the integrated battery work?

When the GNSS receiver is connected to a power source that can support the power drain, the integrated battery is continuously charged from the connected power source. This helps to ensure that the battery stays charged (SPS Modular only).

How does a base station work?

A base station consists of a receiver that is placed at a known (and fixed) position. The receiver tracks the same satellites that are being tracked by the rover receiver, at the same time that the rover is tracking them.

What is base station operation?

This topic introduces the concept of base station operation, provides information to help you identify good setup locations, describes best practices for setting up the equipment, and outlines the precautions that you need to take to protect the equipment.

How do I connect a battery to an energy storage inverter?

52.6 41.7 Please select suitable power cable according to maximum current that may pass through the circuit. If you need advice, please contact your installer for help. Connect the positive and negative terminals of the battery to the battery port of the energy storage inverter with power cables.

How do I set up a GNSS base station?

For good performance, observe the following base station setup guidelines: Place the GNSS receiver in a location on the jobsite where equal range in all directions provides full coverage of the site. This is more important on larger jobsites, where the broadcast range of the base station radio may limit the operations of the system.

What is a base station GNSS receiver?

The base station GNSS receiver can be one of following types: A GNSS smart antenna, such as the SPS985/SPS986, that incorporates a GNSS receiver, GNSS antenna, power supply, and radio into a single compact unit. A GNSS Smart antenna can be rapidly set up on a tripod, fixed height tripod, or anywhere that is convenient on the jobsite.
