Huawei base station poe power supply

Overview

Does Huawei AP support power over Ethernet (PoE)?

Indoors or out, where only AC power is provided, Access Points (APs) that require Power over Ethernet (PoE) can be supported by Huawei's single-port PoE power adapters. The power supply module can support IEEE 802.3at/af power supply and a maximum port rate of 1,000 Mbit/s. The PoE power adapter module has two RJ45 network interface connectors.

What is the maximum port rate of the PoE power supply module?

The maximum port rate of the PoE power supply module is only 100 Mbit/s. The PoE power adapter module has two RJ45 network interface connectors. One RJ45 interface connects to a switch or a network device, and the other is used to transmit network data and supply power to the Power Sourcing Equipment (PSE).

What is a PoE power supply?

A PoE power supply provides power to a PoE system. The number of PDs connected to a PSE is limited by the power output of the PoE power supply. PoE power supplies are classified into built-in and external power supplies depending on whether they are swappable. PoE Implementation Table 8-1 PoE implementation Procedure Item Description 1 PD detection.

What is a PoE system?

PoE system involves the following devices: Power-sourcing Equipment (PSE) A PSE is a PoE device that provides power to PDs and supports detection, analysis, and intelligent power management. PD A PD is a device that receives power from a PSE. Examples of PDs include wireless APs, portable device chargers, POS machines, and cameras.

How many RJ45 connectors does a PoE power adapter module have?

The PoE power adapter module has two RJ45 network interface connectors.

One RJ45 interface connects to a switch or a network device; and the other is used to transmit network data and supply power to the Power Sourcing Equipment (PSE). 1. This content is applicable only to regions outside mainland China.

How many Mbit/s can a power supply module support?

The power supply module can support IEEE802.3at/af power supply and a maximum port rate of 1,000 Mbit/s. The PoE power adapter module has two RJ45 network interface connectors. One RJ45 interface connects to a switch or a network device; and the other is used to transmit network data and supply power to the Power Sourcing Equipment (PSE). 1.
