Integrated UPS uninterruptible power supply

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible power supplies (UPS) are essential to ensure you have continuous power during a power outage. From a small UPS to save and shut down your PC, to large commercial systems that power large data centers or critical systems in hospitals, we have the solutions you and your customers demand.

Why do you need an uninterruptible power supply?

In order to bridge the duration of a power failure and to ensure that systems are shut down properly, uninterruptible power supplies are used. With the new TRIO DC UPS, Phoenix Contact maximizes system availability.

What is int power ups?

INVT Power UPS products range from 1kVA to 600kVA and various UPS accessories as an option, and now we can also offer precision cooling systems, and integrated modular data center solutions for customers, which meet your different requirements in different application scenarios.

What is ups & how does it work?

UPS which stands for Uninterruptible Power Supply is a device that provides backup power to electrical systems during power outages or fluctuations. It helps to ensure uninterrupted operation and protect sensitive equipment from potential damage. We offer different types of UPS serving various requirements and the details can be found below.

What is a 3-phase uninterruptible power supply (UPS)?

A 3-phase uninterruptible power supply (UPS) plays a vital role in data centers, edge computing environments, or commercial or industrial applications where uptime and data integrity are critical.

What is a capacitive uninterruptible power supply?

This will dictate the type and size of the energy storage. The capacitive uninterruptible power supplies are suitable as base devices for critical applications and high system availability, such as interconnected industrial systems in the automotive sector or in intralogistics, as well as for high-current applications with short buffer times.
