What is an RV battery inverter?

An RV battery inverter takes the 12 volt DC (direct current) power from your RV batteries and converts it to 120 volt AC (alternating current) power. Tip: Learn more about current by reading [What Are Amps \(And Amp-Hours\) And Why Do They Matter?](#)

An inverter doesn't store energy like a battery; it just converts it.

How does an RV inverter work?

An inverter uses the RV's 12v batteries to supply the power and inverts the battery 12VDC to become 120VAC power for the outlets. In theory, you can power everything with a large enough inverter, even the air conditioning. However, the inverter cannot provide more power than the battery bank that supplies it.

Do RVs need inverters?

Inverters provide flexibility when running your RV appliances and electronics. You can take advantage of extra power stored in large battery banks or solar panels. This means more freedom to watch movies, cook meals, or keep food fresh without being tied to a campground. Inverters aren't strictly necessary in all RV setups.

What does an auxiliary battery do in an RV?

With the engine off (read: alternator not producing power), the auxiliary battery is used to power all of your interior accessories (interior lights, stereo, 12v fridge/freezer, etc.), thus preserving your starting battery for, well, for starting. What does Aux start in RV mean?

What is the best RV inverter?

We found the Krieger 2000W as the best RV inverter for a reliable power solution on the road. It delivers smooth, continuous AC power up to 2000 watts from our RV battery. This allows us to run essential appliances, charge devices, and use power tools without issues. An LCD display makes it easy to monitor input voltage and output wattage.

Does an RV inverter drain a battery?

The Ampeak 2000W inverter is a top choice for RVs, offering 2,000W continuous and 4,000W peak power, along with 17 safety protections, making it suitable for most appliances. Will an inverter drain my RV battery?

Yes, inverters draw power even when idle and can significantly drain your battery if left on without a load or charging source.
