Outdoor power inverter recommendation

Overview

What size inverter do I Need?

As we demonstrated in our list, there are inverters of all size, from 1.3kW to 12kW. For a small off-grid cabin without AC, we recommend 1kW to 3.5kW. For an off-grid house with a single AC unit, 5kW will do a great job. To power a large off-grid house with all the regular appliances and an AC, you'll need around 10kW of power.

What are the best Inverter generators?

For power outages, camping, and off-the-grid living, we tested the best inverter generators including portable picks from Honda, Champion, Generac, and more.

Should you buy a power camping inverter?

In reviews, one of the things that keep coming up is that this power camping inverter is well built, and holds together well. When going on a wild-thing vacation, quality is important. You don't want your power source falling apart in the desert or out in the woods.

Do you need a power inverter if you're away from home?

But when you're away from home, a power inverter is a great choice for keeping power when you need it, where you need it. With a power inverter, you can charge your devices, use equipment—even run appliances. There are different types. Some require gasoline/propane to run. Others need deep cycle batteries. Still, others use solar energy.

What is the best solar inverter?

We've selected the EasySolar 12/1600, an all-in-one inverter that includes an MPPT solar charge controller and a pure sine wave inverter. All you need to do is plug in your batteries and solar panels. The batteries can be charged by the solar panels or an external AC source (generator, utility grid) as a backup.

Max. PV input power: 2000W.

Should you buy a power inverter?

Power inverters are useful tools, but like anything, not every inverter will be right for every situation. Before investing in one, consider how it will be used. A single person taking a long walk in the woods won't have the same needs as a family of four living long terms off the grid, obviously.
