Will Pakistan build a battery energy storage system?

With funding support from the Asian Development Bank's (ADB) High-Level Technology Fund, the country will build its first large-scale, grid-connected Lithium-Ion Battery Energy Storage System (BESS) to dispatch intermittent renewable energy and improve transmission network stability. Pakistan is facing a serious power shortage.

What will Pakistan's new battery technology do?

With these batteries, Pakistan's National Transmission and Dispatch Corporation Limited—the executing agency, will have a primary and secondary response to power variation and will be able to quickly stabilize frequency. This will avert the need for automatic under-frequency load-shedding.

What is a battery energy storage system?

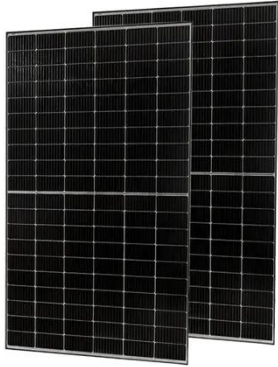

A lithium-ion battery energy storage system is a modular system that can be deployed in standard shipping containers. This system is designed for frequency regulation or the constant second-by-second adjustment of power to maintain system frequency at the nominal value to ensure grid stability.

How did electricity shortages affect business growth in Pakistan?

This hindered economic progress as businesses, especially the manufacturing and service sectors, were gravely affected. A World Bank survey revealed that businesses in Pakistan considered electricity shortages as a major obstacle to business growth. What is a battery energy storage system?
