# Papua New Guinea construction of communication base station inverter

## Overview

---

The Rural Communications Project in Papua New Guinea aims to facilitate improved access to affordable and reliable telecommunications in rural and remote areas. Launched in 2009, the project seeks to provide broadband internet access in rural district centers.

In 2009, only 20 percent of Papua New Guineans had access to cellular coverage, with a majority of the 80 percent that live in rural areas having no access of any kind. High prices and.

The Rural Communications Project was envisaged to provide Internet connectivity for rural and remote areas. Financed by the World Bank and managed by the National ICT.

Challenging terrain - Access levels in Papua New Guinea are among the lowest in the world, with fixed broadband penetration still below 1 percent and overall Internet penetration.

The World Bank has invested a total of US\$ 15 million in this project since 2009. Combined with existing investments by mobile operators, the project is expected to boost total population coverage to over 90 percent by the end of 2015. The benefits of rural connectivity.

Does Papua New Guinea have a mobile telecommunication expansion project?

Now, Papua New Guinea is joining a wave of Pacific island countries liberalizing their telecommunications industries and developing the private sector. The ADB Digicel Mobile Telecommunication Expansion Project, launched in 2009, is at the forefront of those efforts.

How did Papua New Guinea get its phone towers built?

An ADB \$25 million loan funded the construction of the mobile phone towers, as well as phone towers in other remote locations across Papua New Guinea. As soon as the towers were built and operational, Dipole was able to set up his now successful eco-lodge business, which employs 10 people and has visitors all year round.

What was telecommunications like in Papua New Guinea before 2007?

Before 2007, telecommunications in Papua New Guinea - the largest economy in the Pacific region, with a population of 6.7 million - were dominated by the state-owned company, Telikom PNG. The result was fixed-line communications of around just 1% and mobile penetration of less than 5%.

Will Digicel help Papua New Guinea residents get better access to information?

Marcelo Minc, country director of ADB's Papua New Guinea Resident Mission, says improved telecommunications via Digicel's network will help residents of remote areas have better access to information.

Why is mobile penetration increasing in Papua New Guinea?

Photo by Digicel This cell phone tower in Kiunga in Western Province, Papua New Guinea evidences the spread of mobile penetration in the country, which Digicel says has quadrupled since the technology arrived, due to increased network coverage supported by ADB. Photo by Digicel.

Does Papua New Guinea have a private sector?

The result was fixed-line communications of around just 1% and mobile penetration of less than 5%. Now, Papua New Guinea is joining a wave of Pacific island countries liberalizing their telecommunications industries and developing the private sector.
