Photovoltaic glass custom size

Overview

What is Photovoltaic Glass?

Sizes and thickness are determined at the design stage according to the practices used for glass in architecture. Photovoltaic glass made by EnergyGlass replaces the construction's element without nothing else but frames of containment appropriate to the size of the glass and the substructure.

What is Photovoltaic Glass made by energyglass?

Photovoltaic glass made by EnergyGlass replaces the construction's element without nothing else but frames of containment appropriate to the size of the glass and the substructure. There are a wide range of frames that meet the various needs of the customer and they are commonly mounted by the frame-makers.

What is PV glass?

The PV glass are custom modules and are realized so that architects can establish at the planning stage: measures, thickness, power, transparency, screen printing, thermal/acoustic insulation and colors (RAL 1027, RAL 6009, RAL 6005, RAL 8015, RAL 9017, RAL 4007, RAL 6010, RAL 3011, RAL 3013, RAL 5007, 9002, RAL 1014).

What are photovoltaic modules in safety and security glass?

Photovoltaic modules in safety and security glass – BIPV (Building Integrated Photovoltaic) are similar to laminated glass typically used in architecture for facades, roofs and other glass' structures that normally are applied in construction. The single glass before being coupled can be tempered, hardened and treated HST.
