Quality requirements for energy storage products

Overview

Does industry need standards for energy storage?

As cited in the DOE OE ES Program Plan, “Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards . ” [1, p. 30].

What is a quality requirements specification (QRS)?

The purpose of this quality requirements specification (QRS) is to specify quality management requirements and the proposed extent of purchaser intervention activities for the procurement of battery energy storage systems (BESSs) in accordance with IOGP S-753 for application in the petroleum and natural gas industries.

Should energy storage safety test information be disseminated?

Another long-term benefit of disseminating safety test information could be baselining minimum safety metrics related to gas evolution and related risk limits for creation of a pass/fail criteria for energy storage safety testing and certification processes, including UL 9540A.

Is energy storage safe?

Energy storage safety For the past decade, industry, utilities, regulators, and the U.S. Department of Energy (DOE) have viewed energy storage as an important element of future power grids, and that as technology matures and costs decline, adoption will increase.

Does energy storage need C&S?

Energy storage has made massive gains in adoption in the United States and globally, exceeding a gigawatt of battery-based ESSs added over the last decade. While a lack of C&S for energy storage remains a barrier to even higher adoption, advances have been made and efforts continue to fill remain-

ing gaps in codes and standards.

Can the energy storage industry access critical tools for 100 mw projects?

The DOE sponsored an effort to gather input from traditional risk products and finance providers serving more established technologies (e.g., wind, gas generation) to identify how the energy storage industry can access critical tools needed for 100 MW or larger scale projects. The resulting report, published in 2019, is a best
