The lifespan of solar photovoltaic panels

Overview

How long do solar panels last?

Depending on the solar system you buy (quality), your energy consumption profile and the specifics of your roof (sun/shade), the payback can be as quick as 3 years or as long as 7. But, don't forget, once you have paid off the system you will be generating free electricity for many years to come. And good quality panels last 25 years or more.

Do solar panels stop working after 25 years?

After 25 years, solar panels will be less efficient and produce less power. This doesn't mean your solar panels will stop working, but they may be less effective at powering your home and lowering your energy savings. When panels degrade to the point where they no longer produce power, they're ready to be recycled.

What is end-of-life management for photovoltaics?

End-of-life management for photovoltaics (PV) refers to the processes that occur when solar panels and all other components are retired from operation. There are millions of solar installations connected to the grid in the United States, which means there are hundreds of millions of PV panels in use.
