## Overview

---

The power rating, measured in kilowatts (kW), refers to the maximum amount of power the system can deliver or receive at any given moment. What is power rating & battery capacity?

The power rating and battery capacity are key specifications that define the performance and capabilities of a battery storage system. The power rating, measured in kilowatts (kW), refers to the maximum amount of power the system can deliver or receive at any given moment.

What is nominal or rated capacity of a battery?

The Nominal or Rated capacity of a battery (in Ah) is defined as the maximum Ah a fully charged battery can deliver under certain specified conditions. These conditions include: the current (or rate) at which the discharge is carried out and the battery temperature.

What is a battery cabinet?

A battery cabinet serves as a protective and organized enclosure for housing multiple battery modules within an energy storage system. Its primary purpose is to provide a secure environment for the batteries while ensuring their efficient operation. These cabinets are thoughtfully designed to accommodate the modules and optimize space utilization.

What is battery capacity?

This equation applies to either the charge or discharge; that is, the capacity added or capacity removed from a battery or cell. The capacity of a battery or cell is measured in milliampere-hours (mAh) or ampere-hours (Ah). Although the basic definition is simple, many different forms of capacity are used in the battery industry.

What is a power rating?

The power rating, measured in kilowatts (kW), refers to the maximum amount

of power the system can deliver or receive at any given moment. It indicates the system's ability to provide electricity to meet immediate demand or accept power when charging.

What determines the capacity of a battery?

The available capacity of a battery that is able to perform work on discharge is determined by the discharge rate, endpoint voltage, temperature, battery design, age, and life history. The 'capacity' in watt-hours (Wh) is equal to the capacity in ampere-hours multiplied by the battery voltage.
