Underground air compression energy storage project

Overview

The CAES project is designed to charge 498GWh of energy a year and output 319GWh of energy a year, a round-trip efficiency of 64%, but could achieve up to 70%, China Energy said. 70% would put it on par with flow batteries, while pumped hydro energy storage (PHES) can achieve closer to 80%. What is compressed air energy storage?

Compressed air energy storage (CAES) is one of the many energy storage options that can store electric energy in the form of potential energy (compressed air) and can be deployed near central power plants or distribution centers. In response to demand, the stored energy can be discharged by expanding the stored air with a turboexpander generator.

What is compressed air energy storage in aquifers (caesa)?

As a novel compressed air storage technology, compressed air energy storage in aquifers (CAESA), has been proposed inspired by the experience of natural gas or CO₂ storage in aquifers.

Can compressed air energy storage improve the profitability of existing power plants?

New compressed air energy storage concept improves the profitability of existing simple cycle, combined cycle, wind energy, and landfill gas power plants. In: Proceedings of ASME Turbo Expo 2004: Power for Land, Sea, and Air; 2004 Jun 14–17; Vienna, Austria. ASME; 2004. p. 103–10. F. He, Y. Xu, X. Zhang, C. Liu, H. Chen.

Is compressed air energy storage in aquifers a potential large-scale energy storage technology?

Compressed air energy storage in aquifers (CAESA) has been considered a potential large-scale energy storage technology. However, due to the lack of actual field tests, research on the underground processes is still in the stage of theoretical analysis and requires further understanding.

Where is compressed air stored?

Compressed air is stored in underground caverns or up ground vessels , . The CAES technology has existed for more than four decades. However, only Germany (Huntorf CAES plant) and the United States (McIntosh CAES plant) operate full-scale CAES systems, which are conventional CAES systems that use fuel in operation , .

Does Kansas have a compressed air energy storage Act?

For example, the state of Kansas has facilitated these processes with their Compressed Air Energy Storage Act , effective since 2009. A study that reports on promising locations, permitting processes and challenges, and mitigating solutions would help developers navigate these issues during the planning phase.
