How does a flywheel energy storage system work?

Flywheel Energy Storage Systems (FESS) rely on a mechanical working principle: An electric motor is used to spin a rotor of high inertia up to 20,000-50,000 rpm. Electrical energy is thus converted to kinetic energy for storage. For discharging, the motor acts as a generator, braking the rotor to produce electricity.

What is flywheel energy storage system (fess)?

Flywheel Energy Storage System (FESS) is an electromechanical energy storage system which can exchange electrical power with the electric network. It consists of an electrical machine, back-to-back converter, DC link capacitor and a massive disk.

How can flywheels be more competitive to batteries?

The use of new materials and compact designs will increase the specific energy and energy density to make flywheels more competitive to batteries. Other opportunities are new applications in energy harvest, hybrid energy systems, and flywheel's secondary functionality apart from energy storage.

Are flywheel energy storages commercially available?

Flywheel energy storages are commercially available (TRL 9) but have not yet experienced large-scale commercialisation due to their cost disadvantages in comparison with battery storages (higher investment, lower energy density). Another challenge is the comparably high standby loss in FESS caused by the magnetic drag of the motor-generator.

Are flywheel-based hybrid energy storage systems based on compressed air energy storage?

While many papers compare different ESS technologies, only a few research studies design and control flywheel-based hybrid energy storage systems.

Recently, Zhang et al. present a hybrid energy storage system based on compressed air energy storage and FESS.

Is a flywheel energy storage unit a novel uninterruptible power supply?

A novel uninterruptible power supply using flywheel energy storage unit. In: The 4th international power electronics and motion control conference. IPEMC 2004; 2004. p. 1180-4. Zanei G, Cevenini E, Ruff H, Ulibas O. Integrated systems for UPS: New solutions in the power quality chain. In: 29th international telecommunications energy conference.
