

## SolarTech Power Solutions

# Which large energy storage device is the cheapest

## Overview

---

At \$232/kWh, thermal energy storage was the cheapest technology group, followed by compressed air storage. At \$643/kWh, gravity storage had the highest average global capex cost, BNEF said. How much does energy storage cost?

Cost data for most technology groups came from projects deployed globally between 2018 and 2024. At \$232/kWh, thermal energy storage was the cheapest technology group, followed by compressed air storage. At \$643/kWh, gravity storage had the highest average global capex cost, BNEF said.

Which energy storage system has the highest CAPEX cost?

At \$643/kWh, gravity storage had the highest average global capex cost, BNEF said. In non-China markets, installed LDES system costs were 54% higher for thermal energy storage, 66% higher for flow batteries and 68% higher for compressed air storage, BNEF said.

Which energy storage technology groups can discharge for 6 hours?

BNEF examined seven energy storage technology groups that can discharge for durations of at least six hours, including compressed air, compressed gas, pumped hydro, thermal, gravity, flow batteries and lithium-ion batteries. Cost data for most technology groups came from projects deployed globally between 2018 and 2024.

What are energy storage technologies?

Informing the viable application of electricity storage technologies, including batteries and pumped hydro storage, with the latest data and analysis on costs and performance. Energy storage technologies, store energy either as electricity or heat/cold, so it can be used at a later time.

Are long-duration energy storage technologies cheaper than lithium-ion batteries?

This audio is auto-generated. Please let us know if you have feedback. The least expensive long-duration energy storage technologies are now cheaper than lithium-ion batteries for discharge durations longer than eight hours, according to a May 30 report from BloombergNEF.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.
